## GPSG-1000

GPS/Galileo Portable Positional Simulator

**AEROFLEX**  
A passion for performance.

Versatile time-saving portable test set for GPS/GALILEO receivers

- GPS signals simulated: L1, L1C\*, L2C\*, L5\*
- Galileo signals simulated: E1, E5\*\*, E5a\*\*, E5b\*\*
- Simultaneous GPS/Galileo simulation
- SBAS satellites simulated:
  - WAAS/EGNOS L1, L5
- Static or multi-leg dynamic positional simulation via route and waypoint entry system
- 6 or 12 channel configurations available with upgrade path (RAIM supported)
- Programmable space vehicle (SV) parametrics and health
- User or built-in GPS receiver referenced time and date
- Digital noise generation for direct connect testing of receiver
- Large color touch-screen display with simple user interface
- Remote control interface Ethernet
- A-GPS Option (Aeroflex 4400 support)\*\*\*

\* For tracking of L1C, L2C or L5 signals some receivers require synchronized L1 transmissions.

\*\* For tracking of E5 signals some receivers require synchronized E1 transmissions.

### General

The GPSG-1000 is a single carrier, multi-channel simulator designed to be software upgradable.

### Applications

- General testing of civil GPS and Galileo receivers
- Limited testing of military GPS receivers, L1 C/A code or L1 (P)Y pseudo code only

### Channels

The six channel GPSG-1000 configuration provides 3D positional simulation with five channels for RAIM operation and one channel may be allocated to SBAS simulation.

The twelve channel GPSG-1000 configuration provides the same capability as the six channel unit, plus six additional channels. This allows any combination of visible SVs to be selected. One, two or three channels may be allocated to SBAS simulation.

## Setup

The Setup page is partitioned via a tab selection scheme to allow control for Simulation, Almanac, Channels and I/O.

The simulation tab provides controls for GNSS System Selection and Carrier, also Digital Noise, Multipath (fading) model selection, PRN RF Signal levels, Position Source, Simulation Type and SBAS.

## File

The file management system is partitioned via a tab selection scheme. File management is provided for almanacs, routes and simulator settings. Facilities include loading, storage, and naming of files. Files for almanacs, routes and simulator settings may be imported/exported to allow sharing between GPSG-1000 units.

## A-GPS (Assisted GPS) – Option\*\*

The A-GPS option allows the GPSG-1000 to be used in conjunction with the Aeroflex 4400 CDMA Mobile Phone Tester, to provide a comprehensive test of the mobile phone built-in GPS receiver using the A-GPS protocols.

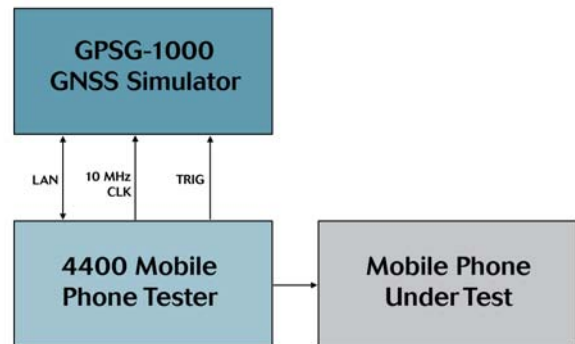

The GPSG-1000 provides a predefined scenario 62.5 min, or 5 navigation messages in length. Three data files are created after an initial real-time run of the simulation, which are provided over the Ethernet interface via a set of remote commands. The files are:

Acquisition: Time stamped data

Processed Navigation Data: Time stamped almanac and ephemeris data in engineering units

Raw Navigation Data: (5 messages) used for sensitivity assistance

The GPSG-1000 can store the scenarios and the relevant files generated in simulator memory using the settings storage facility provided in the GPSG-1000 GUI.

The 4400 utilizes the three file types, which are in a time stamped format, for creating assistance data that is sent to the phone under test upon request. The 4400, via the Ethernet interface, can arm the GPSG-1000 simulation and provide a hardware trigger of the simulation. The GPSG-1000 external 10 MHz clock is provided by the 4400, allowing the synchronization of the RF simulation with the data used in the simulation, stored in the 4400 memory.

# GENERAL SPECIFICATIONS

---

## USER INTERFACE

---

### Display

12" color LCD, sunlight readable with back light

### Controls

Touch screen

## ANTENNA COUPLER

---

### Antenna Coupler

Cavity, patch

### Coupling

21 dB typical at 1575.42 MHz

### Isolation

>25 dB at 1575.42 MHz

>30 dB typical at 1575.42 MHz

## DIRECT CONNECTION PORTS

---

### Impedance

50  $\Omega$

### SWR

1.3:1 maximum

### Connector

TNC x 2

### Coupling

AC (maximum DC input 50 V)

## GENERATOR

---

### GPS Frequencies

L1: 1575.42 MHz (C/A, pseudo P(Y), SBAS)

L1C: 1575.42 MHz

L2: 1227.60 MHz (pseudo P(Y))

L2C: 1227.60 MHz

L5: 1176.45 MHz (New Civil SoL)

### Galileo Frequencies

E1: 1575.420 MHz (pseudo-PRS, [pseudo-G/NAV]), (OS, CS, SoL, I/NAV)

E5: 1191.795 MHz center frequency

E5a: 1176.45 MHz (OS, (F/NAV))

E5b: 1207.14 MHz (CS, SoL, (I/NAV))

### Accuracy

Same as master oscillator

### Inter Channel Bias

Zero (digital design)

### Frame Sync Output

LVTTTL

### Channels

1-6, 1-12 SV simulation, selectable

GPS: PRN=1 to 32

Galileo: PRN=1 to 36

SBAS: PRN=120 to 138.

Positional simulation via menu entry of Latitude and Longitude or positional offset and waypoint.

### Positional Simulation

Static: Via user entry of Latitude/Longitude/Altitude or selectable from waypoint database.

Dynamic: Create, store and recall routes consisting of multiple route points.

### User Defined Doppler Error

Selectable frequency offset  $\pm 5.0$  kHz, 1 Hz increment

### Amplitude Offset

Sets SV carrier amplitude offset from main attenuator setting  $\pm 15$  dB in 1 dB increments.

### Step Error

Sets SV pseudo range error  $\pm 10$  km in 1 m increments (used for RAIM testing)

### Satellite Health

Allows selection of GOOD or BAD

### Code Carrier Coherence

Sets frequency variation between code carriers

Range 2 m/S

Increment 1 mm/S
